innovative high performance
cleaning and laundry sanitization

OMNI Solutions

OMNI Solutions provides innovative laundry cleaning and sanitization solutions and technologies to healthcare, hospitality and commercial institutions. Our energy efficient products help on-premise and commercial businesses produce the cleanest, most hygienic, sanitized laundry possible. Our portfolio includes the Smart Ultraviolet Light Advanced Oxidation System (SULAOS), LUX Hyrdoxyl System, and Smart Laundry Concentrate Products and Smart Housekeeping Concentrate Products. Using Earth-friendly, biodegradable cleaning solutions, OMNI Solutions' programs are designed to help laundries achieve high levels of cleaning and sanitation, decrease negative environmental impacts, and cut operational costs.

SULAOS

smart ultraviolet light advanced oxidation system

OMNI Solutions' SULAOS technology dissolves organic materials from laundry water through an enhanced oxidation process for Tunnel washers. Using a combination of methods involving Ultraviolet Light, SULAOS produces potent oxidizers, including Hyrdoxyl radicals, which react with contaminants, removing all traces from treated water. SULAOS reduces bacteria in laundry water from more than 200 Colony-Forming Units (CFU) to less than 1 CFU, without increasing Total Dissolved Solids (TDS). Reducing water and natural gas usage through SULAOS provides significant dollar savings and ensures linens and the laundry water are hygienically clean. Testing completed by Minnesota Valley Testing Laboratories, Inc., consistently demonstrated bacteria reduction of 99.99%.

LUX

advanced oxidation hydroxyl laundry system

The LUX Hydroxyl System provides outstanding cleaning and disinfection, while significantly lowering utility costs. The LUX technology supercharges in-house laundry systems through Hydroxyl radicals. Hydroxyls are more stable at lower temperatures, reducing the need for hot water by 85%, or in some cases, eliminating the heating of laundry water altogether. The LUX Hydroxyl system is designed to work in tandem with OMNI Solutions biodegradable laundry products, working best in cooler water temperatures, reducing energy consumption, lowering utility costs, and resulting in significant sanitation and disinfection efficacy.

SMART LAUNDRY CONCENTRATE PRODUCTS

OMNI Solutions' smart laundry concentrate products are intended for industrial use only. The biodegradable laundry chemicals are unique in their technology, working with a specialized process. The LUX Hyrdroxyl System naturally super-charges the solution with Hydroxyl radicals prior to injection into the commercial washing equipment. This advanced chemistry works perfectly in cooler water temperatures, substantially reducing energy consumption to provide customers a significant savings in energy costs, while measurably outperforming the competition in terms of cleaning and disinfection. Most products are to be used exclusively with the OMNI Solutions dispensing system. The dispensing rate is set on-site by an OMNI Solutions Laundry Specialist and may vary depending on fabric, water conditions and soil.

SMART HOUSEKEEPING CONCENTRATE PRODUCTS

OMNI Solutions' unique line of smart housekeeping concentrates offers operational efficiencies and cost saving solutions. The consistent, accurate and safe dispenser system disperses OMNI Solutions' proportioned cleaning solutions, reducing waste, spillage and misuse of the products. Cleaning solutions are easily dispensed into a spray bottle or bucket, and savings are realized with less money spent on shipping the water component of ready-to-use cleaning products and packaging. Further, by refilling receptacles, the need for storage space is greatly reduced and less plastic is going into our landfills.

"Conservation should be part of corporate responsibility. It's more important now than ever before to reduce consumption of water and energy and eliminate waste. The focus needs to be on integrating environmental sustainability throughout businesses. OMNI Solutions can help your business reduce energy and water consumption and empower you to further your green initiatives. Determining your "return on investment" is generally the most impactful factor when making a business decision. OMNI Solutions laundry and housekeeping programs are designed to help businesses achieve high levels of cleaning and sanitation, decrease negative environmental impacts, and cut operational costs. Bottom line, with OMNI Solutions you will save money while conserving resources. Our innovative initiatives include water and energy conservation through more sustainable laundry solutions and better housekeeping practices. Thank you for taking time to consider programs that benefit the environment and achieve increased operational efficiencies and profits through OMNI Solutions."
